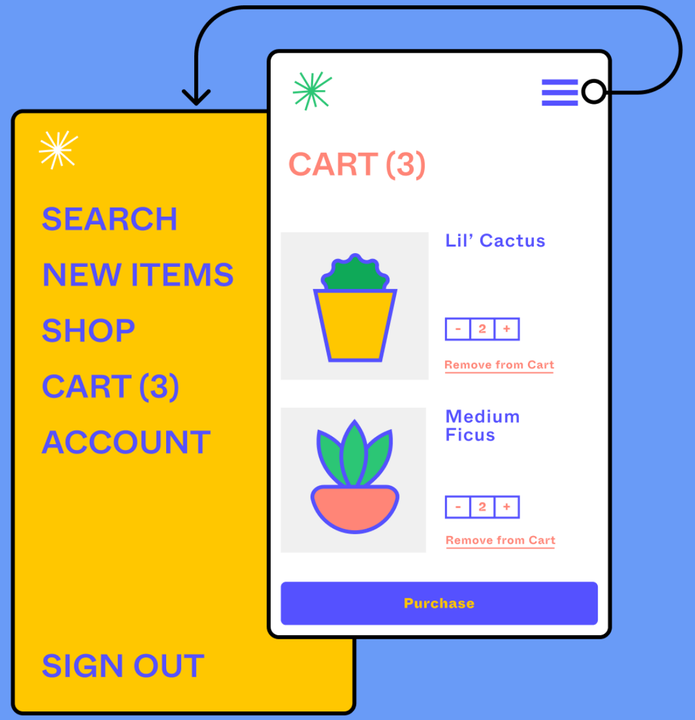
Prototyping features

Prototype while you design, and vice versa

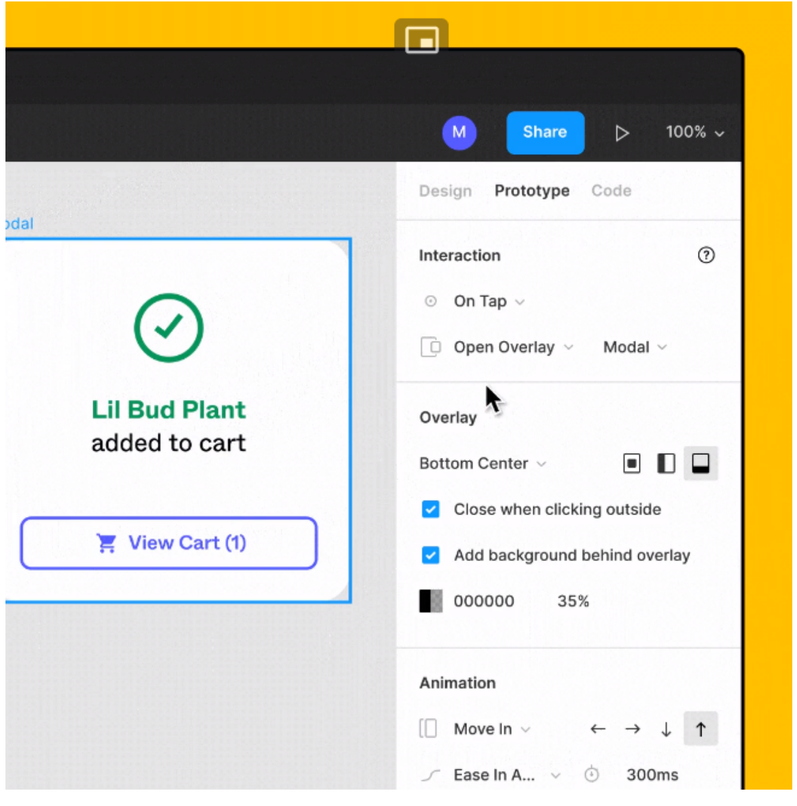
Bring your ideas to life in animated prototypes. Test concepts earlier and more often. Create a better blueprint for development.



Create prototypes that feel like the real experience

Turn your static design files into an interactive experience—no coding required.

- Intuitive build: Simply connect UI elements and choose your interactions and animations.
- Interactions: Define subtle interactions, like on click, while hovering, while pressing a button, and more.
- Mobile-optimized: Details like device frames and momentum scrolling make your prototypes feel like the real experience.



We run a really fast design process. We're constantly building, testing, and iterating. Being able to pull together a prototype in Figma so quickly and easily is massive for us.

Do it all in one single tool

No more jumping between tools. Design, prototype, share, and collect feedback all in Figma.

- All-in-one platform: Toggle between your design file and live prototype. Design edits appear instantly in your prototype.
- Shareable prototype: Share a link to your prototype. View it anywhere with Internet.
- Embedded commenting: Comment in a prototype. They carry over into the design file—so nothing gets lost.
